- (Canceled) 4.
- (Canceled) 5.
- (Previously presented) A cochlear implant system for a patient's cochlea 7. comprising:

at least one electrode for electrical coupling with the patient's cochlea;

an internal coil for implanting in the patient to drive the electrode;

a microphone for outputting electrical sound signals in response to external sounds;

an oscillator for generating an electrical analog carrier signal having a frequency

a modulator for modulating the carrier signal with the sound signals to generate a greater than 20 kHz;

an external coil for magnetically coupling the modulated signal to the internal coil modulated signal; and such that the modulated signal is electrically applied to the cochlea.

- (Original) The system of claim 7, wherein the modulator is an amplitude 8. modulator.
- (Original) The system of claim 7, wherein the modulator is a frequency 9. modulator.
- (Original) The system of claim 7, wherein the electrical analog carrier signal 10. has a frequency of at least 32 kHz.

DOCKET NO. 1420-2 APPLICATION NO. 09/478,136

- 11. (Original) The system of claim 10, wherein the modulator is an amplitude modulator.
- 12. (Original) The system of claim 10, wherein the modulator is a frequency modulator.
